

Continuation of Summary Explanation and Background:

Section 1002.33, Florida Statutes, authorizes the submission of applications for a new charter school. Renewable Industries for Sustainable Energy (R.I.S.E.), submitted a formal application to start a public charter school for the 2019 – 2020 school year.

The Superintendent of Schools appointed a Superintendent's Charter School Review Committee to review and analyze the application for Renewable Industries for Sustainable Energy (R.I.S.E.). The committee is comprised of representatives from Academics/Curriculum, Budget, English for Speakers of Other Languages (ESOL), Exceptional Student Learning Support (ESLS), Facilities, District Administration, and other areas of the organization. Utilizing the Model Florida Charter School Application evaluation criteria, the Committee reviewed the application in detail.

Based on the review, the application is recommended for approval. The mission and academic design of the application meets the minimum requirements of state law and state standards. The school shall open their first year as a 6-9 public charter school, serving a total of 800 students. The maximum enrollment capacity of the school is 1500. The final updated budget and insurance documents will be required prior to approval of the charter school agreement. The charter agreement shall address any issues identified by District staff which require revision or further explanation. The charter school has adopted the same 180-day student calendar in place for the Broward County Public School System.
