

Continuation of Summary Explanation and Background

To enable the City to improve the turning radius at the intersection of NW 10th Avenue and NW 38th Street. This project will allow SBBC buses to more easily navigate the intersection and to enter and exit the adjacent SBBC Central Area Transportation Terminal. The location and proposed improvements are identified and described in Exhibits "A" and "B" to the Easement Agreement.

After approval of this Easement Agreement by the School Board, it will be approved and recorded by the City.
